fact sheet #3

Greener refrigerants for the MRC+ range

MRC+ AND MRC+ LT REFRIGERATION CONDENSING UNITS CAN ALSO OPERATE WITH THE LOWER GLOBAL WARMING POTENTIAL REFRIGERANTS R407A, R407F, R448A AND R449A.

These new refrigerants offer similar capacities to R404A and potential improved system efficiencies of up to 10% depending on operating conditions.

In addition to the system efficiency improvements these new refrigerants have a much lower global warming potential level as can be seen from the table below. This marks the MRC+ products as an alternative for the environmentally aware client, and for the installing engineer the simplicity of application of these refrigerants make the MRC+ an attractive low cost solution to the issues raised by the refrigerant quota in the new F GAS regulations.

Small adjustments to the fully modifiable head pressure control can ensure maximum efficiencies when using these new refrigerants. The evaporator and thermal expansion valves should also be checked for suitability and adjusted for optimum performance. Full performance figures for the MRC+ range with these new refrigerants are shown overleaf.

REFRIGERANT GLOBAL WARMING POTENTIAL COMPARISON

GWP TABLE	
R404A	3922
R407A	2107
R407F	1825
R448A	1387
R449A	1397

MRC⁺ Technical Information
